

6th International Symposium on Trained Immunity | Innate Immune Memory

13th – 15th November 2024 – Dresden, Germany
#iSTIIIMDD2024

Organizers

Triantafyllos **Chavakis**
TU DRESDEN
Zoltan **Fehervari**
NATURE
George **Hajishengallis**
UNIVERSITY OF PENNSYLVANIA
Lydia **Kalafati**
TU DRESDEN
Mihai **Netea**
RADOUD UMC
Michael **Sieweke**
TU DRESDEN

Speakers

Christine Stabell **Benn**
Triantafyllos **Chavakis**
Danica **Chen**
Robin **Choudhury**
Maziar **Divangahi**
George **Hajishengallis**
Melanie **Hamon**
Lydia **Kalafati**
Katherine Y. **King**
Yang **Li**
Arthur **Liesz**
Ichiro **Manabe**

Giuseppe **Matarese**
Musa **Mhlanga**
Willem **Mulder**
Mihai **Netea**
Bali **Pulendran**
Jalees **Rehman**
Chiara **Romagnani**
Michael **Sieweke**
Nancy **Speck**
Joseph **Sun**
Jun **Yan**
Benjamin **Youngblood**

Abstract Submission
June 3rd – September 30th
2024

Scientific Program Committee

Mihai Netea
Radboud University,
Netherlands

George Hajishengallis
University of
Pennsylvania, US

Triantafyllos Chavakis
TU Dresden, Germany

Zoltan Fehervari
Nature, UK

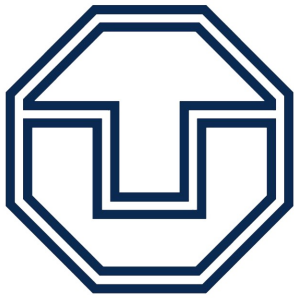

Lydia Kalafati
TU Dresden, Germany

Michael Sieweke
TU Dresden, Germany

Funders

**TECHNISCHE
UNIVERSITÄT
DRESDEN**

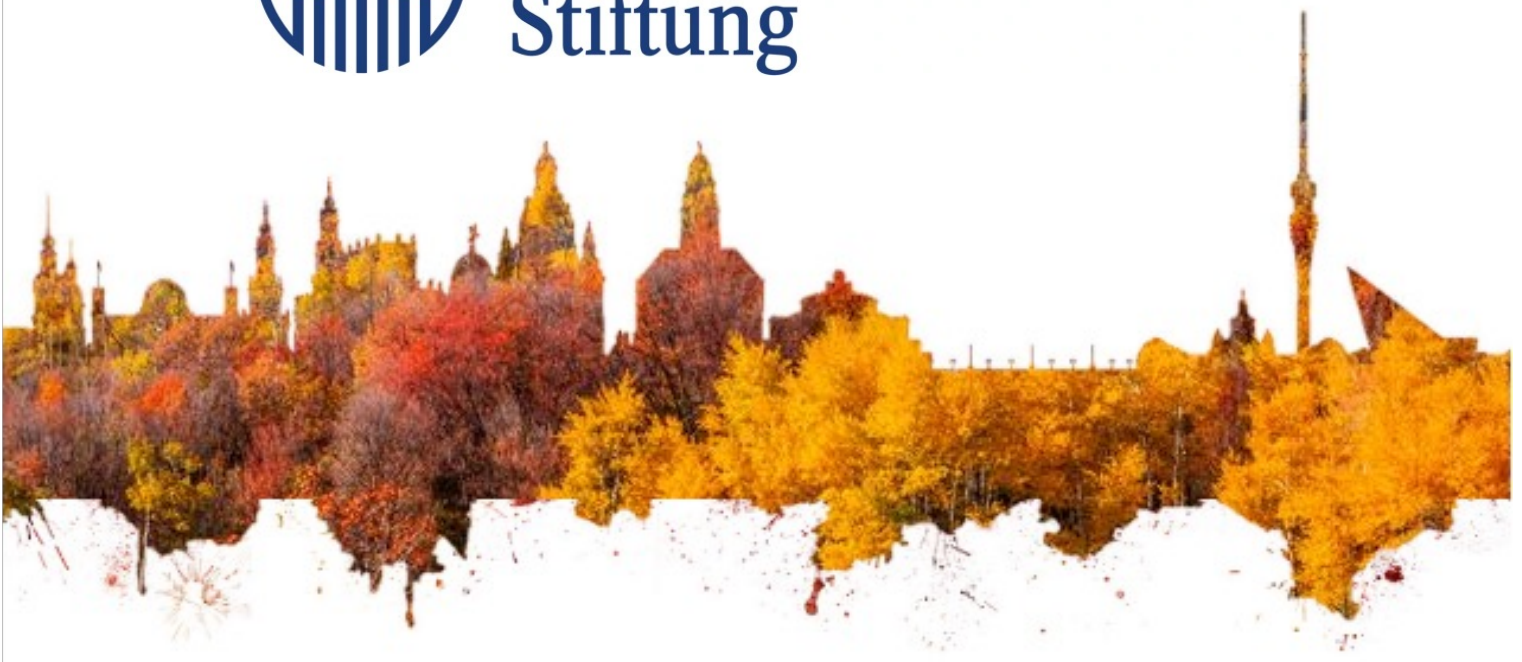

SPMD

Stiftung für Pathobiochemie
und Molekulare Diagnostik

**Boehringer Ingelheim
Stiftung**

Best oral presentation award for early career researchers sponsored by:

Program

Day 1 (November 13, 2024)	
13:50-14:00	Welcome by the organizers (L. Kalafati, M. Sieweke, M. Netea, Z. Fehervari, G. Hajishengallis and T. Chavakis)
Session I: Innate immune memory in Infection and Vaccination / Chair: Divangahi	
14:00-14:25	Christine Stabell Benn (University of Southern Denmark, Denmark) Topic: <i>Clinical implications of the non-specific effects of vaccines: What is known and what needs further study</i>
14:25-14:50	Mihai Netea (Radboud University Nijmegen, Netherlands) Topic: <i>Trained immunity in human myeloid cells in health and disease</i>
14:50-15:15	Bali Pulendran (Stanford, USA) Topic: <i>Systems Vaccinology</i>
15:15-15:45	Break
Session II: Epigenetic mechanisms / Chair: Netea	
15:45-16:10	Musa Mhlanga (Radboud University Nijmegen, Netherlands) Topic: <i>Epigenetics: at the apex of trained immunity</i>
16:10-16:35	Mélanie Hamon (Pasteur Institute, France) Topic: <i>Innate immune memory of Natural killer cells to bacterial infection</i>
16:35-17:00	Benjamin Youngblood (St. Jude, USA) Topic: <i>Translating epigenetic mechanisms of T cell exhaustion into durable immunotherapy</i>
17:00-18:00	<u>4 selected oral presentations from Abstracts (each 15 min incl. discussion)</u> <ul style="list-style-type: none"> • Tanapat Palaga (Chulalongkorn University, Thailand) Topic: <i>A DNA Repair Enzyme MGMT as a Regulator of β-glucan-induced Trained Immunity in Macrophages</i> • Tomoaki Koga (Kumamoto University, Japan) Topic: <i>A histone demethylase KDM7A decelerates profibrotic macrophage skewing via the epigenetic and metabolic reprogramming</i> • Susan Ribeiro (Emory University, USA) Topic: <i>TGF-β and HDACs interplay on the epigenetic reprogramming of HIV reservoirs</i> • Conor Smith (Trinity College Dublin, Ireland) Topic: <i>Innate immune cell dysregulation in Hidradenitis suppurativa</i>
18:00-18:30	Break
Official Opening of the Conference / Chair: Chavakis	
18:30-18:40	Opening and Welcome Esther Troost, Dean, Faculty of Medicine Carl Gustav Carus, TU Dresden, Germany
18:40-19:05	Zoltan Fehervari (Nature, UK) Topic: <i>Navigating publication in high-impact journals</i>
19:05-21:00	Poster Session I and Buffet Dinner

Day 2 (November 14, 2024)	
Session III: Innate Immune Memory in Disease / Chair: Mhlanga	
9:00-9:25	Robin Choudhury (Oxford, UK) Topic: <i>Hyperglycemia Induces Trained Immunity in Macrophages and Their Precursors and Promotes Atherosclerosis</i>
9:25-9:50	Jalees Rehman (University of Illinois College of Medicine, USA) Topic: <i>Trans-generational trained immunity in macrophages</i>
9:50-10:15	Ichiro Manabe (Chiba University, School of Medicine, Japan) Topic: <i>Stress memory in heart failure and multimorbidity</i>
10:15-10:45	Break
Session IV: Innate Immune Memory in Disease including Cancer / Chair: Fehervari	
10:45-11:10	Jun Yan (University of Louisville School of Medicine, USA) Topic: <i>Harnessing the power of trained immunity to combat tumor metastasis</i>
11:10-11:35	Lydia Kalafati (TU Dresden, Germany) Topic: <i>Trained Granulopoiesis in Cancer</i>
11:35-12:00	Willem Mulder (Eindhoven University of Technology, The Netherlands) Topic: <i>Nanobiologic therapeutics in trained immunity</i>
12:00-13:30	Poster Session II and Buffet Lunch
Session V: NK cells / Chair: Sieweke	
13:30-13:55	Chiara Romagnani (Charité Berlin, Germany) Topic: <i>Dynamics and mechanisms of human NK cell memory and clonality</i>
13:55-14:20	Joseph Sun (Sloan Kettering Institute, USA) Topic: <i>NK cells in host innate immune memory</i>
14:20-14:45	Break
Section VI: Selected Abstracts / Chair: Chavakis	
14:45-17:00	<p><u>9 selected oral presentations from Abstracts (each 15 min incl. discussion)</u></p> <ul style="list-style-type: none"> • Nikolaus Dietlein (German Cancer Research Center, Heidelberg, Germany) Topic: <i>Usp22 is an intracellular regulator of systemic emergency hematopoiesis</i> • Mina Morcos (Technical University of Munich, Germany) Topic: <i>BCG-induced immune training modifies the bone marrow microenvironment and exhibits anti-leukemic properties to B-cell acute lymphoblastic leukemia</i> • Leonardo Jurado (McGill University, Canada) Topic: <i>A fungal-derived adjuvant remarkably amplifies the antitumoral potency of BCG</i> • Athanasios Ziogas (Radboudumc, the Netherlands) Topic: <i>Long-term histone lactylation connects metabolic and epigenetic rewiring in innate immune memory</i>

14:45-17:00	<ul style="list-style-type: none"> • Sinu John (National Institute of Allergy and Infectious Diseases, USA) Topic: <i>Macrophage Training Reactivates Latent HIV-1 from HAART-suppressed PBMCs of PLWH</i> • Iain Fraser (National Institute of Allergy and Infectious Diseases, USA) Topic: <i>Endogenous Cytokine Reporter Macrophages Facilitate Identification of Novel Training Compounds that can Reactivate and Initiate Clearance of Latent HIV</i> • Ilayda Baydemir (Radboudumc, the Netherlands) Topic: <i>Enhancing BCG vaccine efficacy through the modulation of Acetyl-CoA metabolism</i> • Anna Ledwith (Trinity College Dublin, Ireland) Topic: <i>Induction of trained immunity through dietary supplementation with β-glucan boosts myeloid anti-tumour immunity in diet induced obesity</i> • Claudio Mauro (University of Birmingham, United Kingdom) Topic: <i>Understanding the Memory of Obesity Associated Trained Immunity in the Adaptive Immune Response</i>
17:00-17:30	Break
Session VII: Bone Marrow and Trained immunity / Chair: King	
17:30-17:55	Triantafyllos Chavakis (TU Dresden, Germany) Topic: <i>Bone marrow-mediated trained immunity in inflammatory disease</i>
17:55-18:20	Maziar Divangahi (McGill University, Canada) Topic: <i>Unlocking the Power of Trained Immunity in Pulmonary Infections</i>
18:20-18:45	Michael Sieweke (TU Dresden, Germany) Topic: <i>Macrophage self-renewal and age dependent epigenetic noise</i>
Day 3 (November 15, 2024)	
Session VIII: Bone Marrow, Clonal Hematopoiesis, and Trained immunity / Chair: Romagnani	
9:00-9:25	Danica Chen (UC Berkeley, USA) Topic: <i>Aging and Trained Immunity</i>
9:25-9:50	George Hajishengallis (University of Pennsylvania, USA) Topic: <i>Clonal hematopoiesis, trained immunity and maladaptive epigenetic alterations</i>
9:50-10:15	Katherine Y. King (Baylor College, TX, USA) Topic: <i>Cellular and epigenetic basis of trained immunity in hematopoietic stem and progenitor cells</i>
10:15-10:40	Nancy Speck (University of Pennsylvania, USA) Topic: <i>Regulation of innate immune responses by RUNX1</i>
10:40-11:05	Yang Li (Helmholtz Zentrum, Braunschweig, Germany) Topic: <i>Uncovering Regulatory Networks and Causal Drivers of Viral Infection through Multi-Omics Data Integration</i>
11:05-11:40	Break
Session IX: Selected Abstracts / Chair: Kalafati	

11:40-13:10	<p><u>6 selected oral presentations from Abstracts (each 15 min incl. discussion)</u></p> <ul style="list-style-type: none"> • Angela Bordin (Texas A&M University, USA) Topic: <i>Enteral immunization induces trained immunity and protection against pneumonia in newborn foals through the gut-lung axis</i> • Rutger Röring (Murdoch Children's Research Institute, Australia) Topic: <i>Determinants of innate immune cytokine responses in pre-school children: a population-derived cohort study</i> • Hannah Riley Knight (University of Chicago, USA) Topic: <i>High-throughput screen identifies non inflammatory small molecule inducers of trained immunity</i> • Ioannis Belios (University Medical Center Hamburg-Eppendorf, Germany) Topic: <i>Evidence of trained immunity against Influenza-A virus infection after exposure to prenatal stress.</i> • Jonas Geldner (Hannover Medical School, Germany) Topic: <i>The COVID-19 lockdown is associated with impaired systemic immune maturation in preterm infants</i> • Susanna Fagerholm (University of Helsinki, Finland) Topic: <i>Integrins as regulators of dendritic cell mechanical immune memory and anti-tumor responses</i>
13:10-14:10	Lunch
Session X: Immunometabolism / Chair: Hajishengallis	
14:10-14:35	<p>Giuseppe Matarese (University of Napoli, Italy) Topic: <i>The missing link between maintenance of immune tolerance and trained immunity</i></p>
14:35-15:00	<p>Arthur Liesz (Ludwig-Maximilians-Universität Munich, Germany) Topic: <i>Trained Immunity in Brain Ischemia</i></p>
15:00-15:20	Closing remarks and young investigator awards

Oral Abstracts

Short Talks (Session II - Epigenetic mechanisms) Talk ID

A DNA Repair Enzyme MGMT as a Regulator of β -glucan-induced Trained Immunity in Macrophages.....1

TGF- β and HDACs interplay on the epigenetic reprogramming of HIV reservoirs2

A histone demethylase KDM7A decelerates profibrotic macrophage skewing via the epigenetic and metabolic reprogramming.....3

Innate immune cell dysregulation in Hidradenitis suppurativa4

Short Talks (Session VI - Selected Abstracts)

Macrophage Training Reactivates Latent HIV-1 from HAART-suppressed PBMCs of PLWH.....5

Endogenous Cytokine Reporter Macrophages Facilitate Identification of Novel Training Compounds that can Reactivate and Initiate Clearance of Latent HIV.....6

A fungal-derived adjuvant remarkably amplifies the antitumoral potency of BCG.....8

Usp22 is an intracellular regulator of systemic emergency hematopoiesis9

Long-term histone lactylation connects metabolic and epigenetic rewiring in innate immune memory 10

BCG-induced immune training modifies the bone marrow microenvironment and exhibits anti-leukemic properties to B-cell acute lymphoblastic leukemia..... 11

Enhancing BCG vaccine efficacy through the modulation of Acetyl-CoA metabolism 12

Induction of trained immunity through dietary supplementation with β -glucan boosts myeloid anti-tumour immunity in diet induced obesity13

UNDERSTANDING THE MEMORY OF OBESITY ASSOCIATED TRAINED IMMUNITY IN THE ADAPTIVE IMMUNE RESPONSE 14

Short Talks (Session VI - Selected Abstracts)

Determinants of innate immune cytokine responses in pre-school children: a population-derived cohort study 15

The COVID-19 lockdown is associated with impaired systemic immune maturation in preterm infants..... 16

Enteral immunization induces trained immunity and protection against pneumonia in newborn foals through the gut-lung axis 17

High-throughput screen identifies non inflammatory small molecule inducers of trained immunity 18

Evidence of trained immunity against Influenza-A virus infection after exposure to prenatal stress 19

Integrins as regulators of dendritic cell mechanical immune memory and anti-tumor responses20

Poster Abstracts

<i>BCG-induced modulation of TNBS-induced colitis.....</i>	<i>1</i>
<i>Enhanced H3K4me3 in monocytes exposed to tumor microenvironment</i>	<i>2</i>
<i>Leveraging models of trained immunity to improve outcomes in glioblastoma</i>	<i>3</i>
<i>Dietary fibre and its metabolites regulate alveolar macrophage transcriptional landscape and alter bone marrow progenitor phenotype.....</i>	<i>4</i>
<i>The role of the innate immune system in semi-immunity to malaria</i>	<i>5</i>
<i>Trained immunity induction by a new recombinant BCG vaccine, BCG::ESX-1Mmar, in non-human primates</i>	<i>6</i>
<i>Investigating trained innate immunity in recipients of HIV pre-exposure prophylaxis (PrEP)</i>	<i>7</i>
<i>TWEAK-mediated histone modifications exert inflammatory priming in colonic fibroblasts 8</i>	
<i>Heat-killed Mycobacterium tuberculosis induces trained immunity and enhances tumor-killing capacity in healthy volunteers and colon cancer patients</i>	<i>9</i>
<i>Meta-analysis of RNA-sequencing datasets of human trained immunity models identifies a common transcriptional signature</i>	<i>10</i>
<i>COVID-19 lung imprinting and consequences for disease development</i>	<i>11</i>
<i>Investigating the impact of Staphylococcus aureus exposure on innate immune memory 12</i>	
<i>Transgenerational trained immunity modulates lung inflammatory responses</i>	<i>13</i>
<i>Helminth infection induces trained immunity in plasmacytoid dendritic cells</i>	<i>14</i>
<i>Glutamine is Essential for Cytokine-Induced Training in Natural Killer Cells.....</i>	<i>15</i>
<i>Defining the effects of trained immunity on airway epithelial and fibroblast cells during infection.....</i>	<i>16</i>
<i>IgA-mediated phagocytosis stimulates innate memory in effector phagocytes through metabolic and transcriptional reprogramming</i>	<i>17</i>
<i>The role of Candida parapsilosis in modulating immune responses in health and oral carcinoma.</i>	<i>18</i>
<i>High throughput screening identifies compounds that confer trained immunity to human macrophages.....</i>	<i>19</i>
<i>Longitudinal study reveals distinct monocyte trajectories and their clinical determinants in a German preterm birth cohort</i>	<i>20</i>
<i>Blood neutrophils as blueprints of epigenetic hematopoietic stem cell reprogramming upon distinct mycobacterial stimuli.....</i>	<i>21</i>
<i>Control of immunological self-tolerance through stimulation of trained immunity.....</i>	<i>22</i>
<i>INSIGHTS RELATING TO HETEROGENOUS INNATE IMMUNE TRAINING IN MONOCYTES FROM OLDER INDIVIDUALS.....</i>	<i>23</i>

<i>Discovery of New Trained Immunity Molecules and Pathways</i>	24
<i>β-GLUCAN EXPOSITON TRIGGERS MONOCYTE REPROGRAMMING, ENHANCING ITS PHAGOCYTOSIS WHILE DAMPENING ITS COMMUNICATION WITH ADAPTATIVE IMMUNITY</i>	25
<i>Kruppel-like factor 6 contributes to innate immune memory</i>	26
<i>Tolerogenic Effects of Glycolipid PIM6 on the Myeloid Cell Compartment</i>	27
<i>Deciphering the Influence of the Immune Environment on Trained Immunity Induction</i> ...	28
<i>Trained Immunity—Going Viral: β-Glucan Immunometabolic Rewiring Enhances Antiviral Immunity via Interferon-Dependent Antiviral Training (IDAT)</i>	29
<i>Persistently altered human macrophage states in SARS-CoV2 convalescent airways drive differential responses to Mycobacterium tuberculosis infection</i>	30
<i>Title</i>	31
<i>The role of memory alveolar macrophages in host defense against Influenza A virus infection</i>	32
<i>Respiratory mucosal delivery of adenoviral vectored TB vaccine provides enhanced innate protection against SARS-CoV-2 infection</i>	33
<i>Improved innate recruitment and functionality against Listeria monocytogenes infection after small molecule training</i>	34
<i>PD-1 signaling dampens β-glucan-induced trained immunity and associated host response</i>	35
<i>Hyperglycaemia-Induced Trained Immunity in Type 2 Diabetes patients following myocardial infarction</i>	36
<i>Assessing Trained Immunity Induced by COVID-19 Vaccines</i>	37
<i>Harnessing Innate Immune Training in Human Tonsil-Derived Organoids to Study Adaptive Immune Responses Against Viral Pathogens</i>	38
<i>Inhibition of trained immunity by IL-37 and IL-38 and its potential implication in autoinflammatory conditions</i>	39
<i>Gut microbiome-derived small extracellular vesicles exhibit memory-like inflammatory features in murine and human neutrophils</i>	40
<i>Akt1 kinase inhibition promotes macrophage activation and Slamf8-dependent phagosomal maturation and protects against neonatal Group B Streptococcus infection</i> .41	
<i>Differential cytokine patterns following in vitro monocytes activation by vaccines: can we predict the induction of trained innate immunity?</i>	42
<i>DEL-1 is a novel endogenous senolytic protein that inhibits senescence-associated bone loss</i>	43
<i>The CREB binding protein (CBP) in myeloid cells impacts trained immunity and anti-tumoral responses</i>	44
<i>Role of Morphine in the differentiation and function of antigen-presenting cells</i>	45

<i>Bone marrow mesenchymal stem cell training supports lung cancer-adapted hematopoiesis</i>	46
<i>A role of Herd Trained Immunity (HTI) in the Post-COVID-19 pandemic increased incidence of invasive S. pyogenes (GAS) infections</i>	47
<i>Transcriptional memory of bacterial infection modulates gingival and skin fibroblast responses to secondary inflammatory challenges</i>	48
<i>L-arginine contributes to the induction of trained immunity in human primary monocytes</i>	49

Poster Session II

Poster ID

<i>Methylation and Transcriptomic Profiling Reveals Short Term and Long Term Regulatory Responses in Polarized Macrophages</i>	50
<i>The epigenome of fibrotically activated macrophages</i>	51
<i>IFN-γ reprograms monocyte metabolism and induces antimicrobial trained immunity</i>	52
<i>Immune Cells Respond Differently to Immune Modulators Based on Metabolic Health</i>	53
<i>Reprogramming monocytes in the tumor microenvironment: implications for trained immunity</i>	54
<i>Ligamentum flavum-derived fibroblasts exhibit altered responsiveness to TLR signals in the context of obesity and insulin resistance</i>	55
<i>DEF6 promotes canonical CD56dim NK cell survival and function</i>	56
<i>Maternal malnutrition induces in the neonate a lifelong enteropathy avoidable by postnatal S100a8/a9-conditioning</i>	57
<i>Deciphering the impact of gammaherpes virus infection on monocyte development and functional programming</i>	58
<i>MoDCs and AMs: Shaping The Immune Memory during Pneumonia</i>	59
<i>Impact of mitochondrial stress in the pathogenesis of dermatomyositis</i>	60
<i>Somatic mutations define clonal NK cell memory</i>	61
<i>Central trained immunity is modulated by stimuli mimicking various type of infection</i>	62
<i>Unraveling the Mechanisms of BCG-Induced Early-Life Protection Against Tuberculosis</i>	63
<i>Trained immunity as a potential causative link in the NASH-periodontitis comorbidity</i>	64
<i>Targeting glutaminolysis pathway in trained immunity induced by oxidized low-density lipoprotein</i>	65
<i>Immunology meets the Department of Orthodontics in Erlangen – overview of recent research and future approaches</i>	66
<i>Trained immunity within the mononuclear phagocyte precursor pool and its role for anti-viral immune responses</i>	67
<i>In vitro characterization of heme-induced innate immune training</i>	68

<i>Neutrophil cell death modulates the trained immunity-mediated anti-tumor response</i>	<i>69</i>
<i>HCMV UL24 and UL43 Cooperate to Modulate the Expression of Immunoregulatory UL16 binding protein 1 (ULBP1)By CMV-encoded miR-UL59</i>	<i>70</i>
<i>NTHi infection can delay strong inflammatory responses and induce an immune tolerance in airway epithelial cells</i>	<i>71</i>
<i>Repeated application of Pam3-FSL-1 reduces experimental allergic airway inflammation in mice and alters the immune response of airway epithelial cells</i>	<i>72</i>
<i>Induction of emergency granulopoiesis by BCG is independent of maternal BCG immunisation and the microbiota</i>	<i>73</i>
<i>Residence of Candida on human epithelia can affect the memory function of the innate immunity.....</i>	<i>74</i>
<i>Transcriptional Profile of Mycobacterium Tuberculosis Infection in People living with HIV</i>	<i>75</i>
<i>Interleukin-38 is a Negative Regulator of Trained Immunity</i>	<i>76</i>
<i>Investigating the Relationship Between Obesity-Related Compounds and Human Monocyte Priming</i>	<i>77</i>
<i>CNF1 toxin-triggered trained immunity relies on NLRP3 inflammasome activation.....</i>	<i>78</i>
<i>Examining the Role of Histone Lactylation in Microglial Immune Memory</i>	<i>79</i>
<i>HIGH SODIUM INDUCES NFAT5-DEPENDENT TRAINED IMMUNITY.....</i>	<i>80</i>
<i>Differences in BCG-induced trained immunity in young and elderly mice.....</i>	<i>81</i>
<i>Revealing the functional characteristics of BLP-trained macrophages through single-cell transcriptomics.....</i>	<i>82</i>
<i>Immunomodulatory Role of S100A9 and Tasquinimod in Myelodysplastic Neoplasms: Targeting MSC-Mediated Inflammation</i>	<i>83</i>
<i>Delineating the therapeutic potential of trained neutrophils in the context of cancer therapy</i>	<i>84</i>
<i>Role of ACKR2 in the regulation of granulopoiesis</i>	<i>85</i>
<i>Obesity-induced persistent changes in bone marrow endothelial cells</i>	<i>86</i>
<i>BCG and MMR vaccination induce innate immune memory in $\gamma\delta$ T cells in humans</i>	<i>87</i>
